

# **ABSTRACT**

[SUMMARY]

[OBJECT]

To update software easily and efficiently and in the  
5 same time reducing the load imposed on the user side, the  
software vendor side and the center computer side.

[MEANS FOR SOLVING]

When the user computer 103 sends user ID to the center  
computer 102, the center computer 102 have the user computer  
10 103 obtain URL of the module storing region 104 that  
corresponds to the user ID and stores the modules that the  
user should obtain. The user computer 103 accesses to the  
module storing portion using the URL, obtains a list of  
modules, compares the list to the modules that are currently  
15 installed in itself and judges whether it is necessary to  
obtain modules. When judged that modules are needed to be  
obtained, the user computer 103 accesses to the module  
storing region again and obtains the module.
